

“Welcome everyone!

I am the human brain — small in size, but incredibly powerful.

I help you think, learn, dream, speak, and even imagine the future.

Now, let's discover the secrets that make me one of the most amazing organs in the human body.”

• Who am I?

- I am the main organ of the nervous system
- I control your thoughts, memory, emotions, and body movements.
- I receive information from your senses.
- I am the one who help you learn speak and make decisions

Important fact 🤔

My average weight is about
1.4 kilograms.

• Where Am I Located?

I live safely inside your skull, one of the strongest parts of your body. But I am very delicate, so your body gives me special protection.

I am protected by:

- Strong skull bones
- Meninges — special protective layers around me
- Cerebrospinal fluid, which acts like a soft cushion and protects me from shocks

- Why is my protection important?

Because I control your entire body, even a small injury to me can affect your survival, memory, movement, and daily life.

• What Are My Main Parts?

I may look small, but I have three powerful main parts, and each one has a special job to do.

1. Cerebrum

2. Cerebellum

3. Brainstem

1. Cerebrum

This is my biggest part and the center of intelligence.

I use it to help you think, learn, remember, speak, imagine, and solve problems.

It also controls your body movements and helps shape your personality and emotions.

2. Cerebellum

This part helps me keep your body balanced and your movements smooth.

Whether you are walking, running, dancing, writing, or playing sports, this part helps you move in coordination.

3. Brainstem

This is one of my most important parts because it controls automatic life functions.

It manages breathing, heartbeat, digestion, swallowing, and even sleep — without you needing to think about them.

HUMAN BRAIN DIAGRAM

LABELED PARTS & FUNCTIONS

CEREBRUM

- Thinking, Memory, Senses & Voluntary Movements

TEMPORAL LOBE

- Hearing & Language

HYPOTHALAMUS

- Regulates Hunger, Thirst, Emotions & Body Balance

BRAINSTEM

- Breathing, Heart Rate, Reflexes

FRONTAL LOBE

- Reasoning, Planning, Problem Solving

PARIETAL LOBE

- Touch, Temperature, Spatial Awareness

OCCIPITAL LOBE

- Vision & Visual Processing

CEREBELLUM

- Balance & Coordination

PITUITARY GLAND

- Controls Hormones & Growth

• What Do I Do ?

- I control body movements like walking, writing, and playing.
- I help you think, learn, and solve problems.
- I store memories and control emotions.
- I process information from your senses.
- I also control breathing and heartbeat.

“That’s why I am called the control center of the human body.”

How To Keep Me Healthy ?

Enough sleep **zzz**

Exercise regularly

Meditation

Stay hydrated

Healthy diet

Avoid alcohol

Keep physically active

Keep learning

All my parts work together like an amazing team, helping you live, learn, move, and experience the world around you.

Thank you
